The Honorable Maureen McKee
Noted for Consideration: December 7, 2026
Without Oral Argument

SUPERIOR COURT OF THE STATE OF WASHINGTON
FOR KING COUNTY

J. DOE A, in their individual capacity and on behalf of their minor child; JANE DOE B and JANE DOE C, in their individual capacities and on behalf of their minor child; JANE DOE D, in their individual capacity and on behalf of their minor child; JANE DOE E and JOHN DOE F, in their individual capacities and on behalf of their minor child; JOHN DOE G, in their individual capacity and on behalf of their minor child; TRANSFAMILIES, a nonprofit organization; and WASHINGTON EDUCATION ASSOCIATION, a nonprofit organization,

Plaintiffs,

v.

STATE OF WASHINGTON,

Defendant.

No. 26-2-37399-0 SEA

MOTION OF WASHINGTON STATE MEDICAL ASSOCIATION, WASHINGTON CHAPTER OF THE AMERICAN ACADEMY OF PEDIATRICS, AMERICAN COLLEGE OF OBSTETRICIANS AND GYNECOLOGISTS, WASHINGTON ACADEMY OF FAMILY PHYSICIANS, WASHINGTON CHAPTER OF THE AMERICAN COLLEGE OF PHYSICIANS, WASHINGTON STATE PSYCHIATRIC ASSOCIATION, WASHINGTON CHAPTER OF THE NATIONAL ASSOCIATION OF PEDIATRIC NURSE PRACTITIONERS, WASHINGTON STATE NURSES ASSOCIATION, APRNS OF WASHINGTON STATE, AND ASSOCIATION OF ADVANCED PRACTICE PSYCHIATRIC NURSES FOR LEAVE TO FILE BRIEF AS AMICI CURIAE IN SUPPORT OF PLAINTIFFS' MOTION FOR PRELIMINARY INJUNCTION

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

Amici Curiae Washington State Medical Association, Washington Chapter of the American Academy of Pediatrics, American College of Obstetricians and Gynecologists, Washington Academy of Family Physicians, Washington Chapter of the American College of Physicians, Washington State Psychiatric Association, Washington Chapter of the National Association of Pediatric Nurse Practitioners, Washington State Nurses Association, APRNs of Washington State, and Association of Advanced Practice Psychiatric Nurses (collectively, "Amici") respectfully request leave to submit the brief in support of Plaintiffs' motion for preliminary injunction attached hereto as **Exhibit A**.

Although the Civil Rules do not expressly provide for amicus participation in the Superior Court, this Court has discretion to permit it. As the Court of Appeals has explained, "[n]o specific rule permits amicus participation in the trial court, but neither is there any rule prohibiting it. We can see no reason a trial judge should not have discretion to permit such participation if it may be helpful to the court." *Parsons v. State*, 129 Wn. App. 293, 302 (2005).

The Parties have been notified of this motion. The undersigned counsel contacted counsel for each of the Parties via email on November 20, 2026. Plaintiffs and Proposed Intervenors have confirmed that they do not oppose this request. At the time of this filing, Defendant has not yet responded.

## I. AMICI'S IDENTITIES

Amici include many of the state's leading medical and nursing associations and organizations, together representing thousands of family-medicine doctors, pediatricians, physician assistants, nurses, and other healthcare providers dedicated to providing safe, evidence-based healthcare to all Washingtonians.

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

**Washington State Medical Association ("WSMA")** is a private, nonprofit membership organization and the largest physician professional association in Washington State, representing over 14,000 physicians, residents, medical students, and physician assistants from nearly all specialties and practice settings throughout the state. WSMA focuses on providing strong physician leadership and advocacy to shape the future of medicine and advance quality healthcare for all Washingtonians.

**Washington Chapter of the American Academy of Pediatrics ("WCAAP")** is a 501(c)(3) nonprofit organization that represents almost 1,200 pediatric healthcare providers—including general pediatricians, sub-specialists, hospitalists, family physicians, and advanced practice providers—in Washington State. WCAAP seeks to champion the health and wellbeing of children, adolescents, and families through advocacy, education, and partnership.

**American College of Obstetricians and Gynecologists ("ACOG")** represents more than 90% of board-certified obstetrician-gynecologists, including those providing healthcare for women and girls in Washington State. With more than 575 ACOG Fellows in the state, ACOG advocates for quality healthcare for all people seeking ob-gyn care, maintains the highest standards of clinical practice and continuing education of its members, promotes patient education, and increases awareness among its members and the public of changing issues facing women's and girls' healthcare. ACOG is committed to defending the right of physicians to practice the full scope of obstetrics and gynecology and to ensuring access for all people to the full spectrum of evidence-based, quality reproductive healthcare.

**Washington Academy of Family Physicians** is the largest medical-specialty professional organization in the state and represents nearly 3,800 members, including physicians, residents, and medical students who specialize in family medicine. The

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

organization works to influence the development of policy that will provide optimal health for all people in Washington State.

**Washington Chapter of the American College of Physicians ("ACP")** is a 501(c)(3) nonprofit organization that represents approximately 2,500 internal-medicine physicians in Washington State. Internal-medicine physicians specialize in the prevention, detection, and treatment of illnesses in adults. ACP members include general internists, hospitalists, sub-specialists, medical students, residents, and fellows. ACP and its physician members lead the profession in education, standard-setting, and the sharing of knowledge to advance the science and practice of internal medicine.

**Washington State Psychiatric Association ("WSPA")** is a professional medical association representing more than 500 psychiatrists in the state and is a district branch of the American Psychiatric Association. WSPA advocates for its members and their patients, promotes high standards of psychiatric care through education and advocacy, and supports policies that advance safe, effective, and evidence-based mental-health treatment. WSPA has a substantial interest in legal and regulatory matters affecting psychiatric practice, patient care, and access to mental-health services throughout Washington State.

**Washington Chapter of the National Association of Pediatric Nurse Practitioners** is the professional association for pediatric nurse practitioners and pediatric-focused advanced practice registered nurses, dedicated to improving child and adolescent healthcare.

**Washington State Nurses Association ("WSNA")** is both a labor union and the professional association for nurses in Washington State, with over 22,000 members. WSNA provides representation, education, and resources that allow nurses to reach their full professional potential and focus on caring for patients. WSNA has represented nurses in the

**Ashurst Perkins Coie US LLP**

Fax: 206.359.9000

state since 1908, leveraging its collective voice to successfully advocate with employers, state agencies, and the Washington State Legislature for better working conditions, safe staffing, fair compensation, and patient safety. For more than 110 years, WSNA has championed issues that support nurses, advance professional standards, and improve the health of individuals and families in the state.

**APRNs of Washington State ("AOWS")** is a nonprofit professional organization that represents Advanced Registered Nurse Practitioners across Washington State. Through legislative advocacy, education, and professional networking, AOWS works to advance high-quality, evidence-based care; protect the ability of Advanced Registered Nurse Practitioners to practice to the full extent of their education and training; and expand access to care for all Washingtonians.

**Association of Advanced Practice Psychiatric Nurses ("AAPPN")** is Washington State's professional home for advanced practice psychiatric nurses. With more than 350 members—from Bellingham to Richland, Vancouver to Spokane—AAPPN is the only organization specifically dedicated to the profession in the state. Its clinical members work in community clinics, higher education, hospitals, and private practice, and its student members attend programs throughout the state. AAPPN promotes excellence in the profession by providing education, networking, and professional-growth opportunities. By supporting the profession, AAPPN joins the state's leaders in striving for the highest-quality mental healthcare for its citizens.

## II. AMICI'S INTERESTS IN THIS MATTER

Amici have a substantial interest in this case, where Plaintiffs challenge the constitutionality of Initiative Measure No. 638 (the "Initiative") and have moved to preliminarily enjoin it. The Initiative requires that students seeking to participate in school

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

sports "intended for female students only" "shall provide, as part of the required routine sports physical examination, a health examination and consent form or other statement signed by the student's personal health care provider that verifies the student's biological sex, relying only on one or more of the following: The student's reproductive anatomy, genetic makeup, or normal endogenously produced testosterone levels." The Initiative does not, however, clearly define what constitutes a health examination or identify what physicians must do to comply with the verification-requirement options.

Amici's members include the pediatricians, family physicians, and other primary-care providers who perform pre-participation physical evaluations (or "sports physicals") for student athletes statewide and who would therefore be tasked with carrying out the Initiative's sex-verification examination and testing requirements. Sports physicals are designed to diagnose conditions that could put a child or young athlete at risk of serious injury, illness, or other health complications during sports participation. These evaluations follow established medical standards and focus on a child's health history and physical wellbeing. They do not routinely include examinations of a child's genitals or "reproductive anatomy," which are performed *only* when medically indicated. Accordingly, Amici believe that the Initiative's examination and testing requirements depart from the accepted standard of care, create considerable uncertainty for physicians who must verify and document a student's "biological sex" in the absence of a workable clinical standard, and raise serious ethical and privacy concerns that could deter students from participating in sports.

## III. FAMILIARITY WITH THE ISSUES

Amici are thoroughly familiar with the medical, ethical, and practical issues presented by the Initiative because their members confront these issues every day in clinical practice. Amici's members include many of the clinicians who conduct sports physicals for

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

student athletes statewide, care for children and adolescents across every stage of development, and would be required to carry out the sex-verification mandate that the Initiative imposes.

## IV. ISSUES TO BE ADDRESSED

Amici's proposed amicus brief offers additional context to aid the Court's consideration of whether a preliminary injunction should issue in this case. Specifically, Amici will discuss the following issues: (1) why the Initiative's requirement for medically unnecessary sex-verification examinations is contrary to the established standard of care for sports physicals; (2) the absence of any workable clinical standard to guide physicians and other clinicians in verifying and documenting a student's "biological sex"; and (3) the significant ethical, privacy, and cost concerns raised by these requirements.

## V. REASONS SUPPORTING ADDITIONAL ARGUMENT

This Court has discretion to allow amicus curiae participation if it may be helpful. *Parsons*, 129 Wn. App. at 302. Drawing on their members' expertise and experience, Amici will explore the issues identified above. Amici respectfully submit that this perspective will help the Court assess the harms that the Initiative could cause and balance the equities in this case.

## VI. CONCLUSION

For these reasons, Amici respectfully move this Court for leave to file the amicus curiae brief that accompanies this motion.

Phone: 206.359.8000
Fax: 206.359.9000

## I. INTRODUCTION

Initiative Measure No. 638 (the "Initiative" or "I-638") imposes legal obligations without clinical standards. Amici—a collection of Washington State's leading medical and nursing associations and organizations, together representing thousands of family-medicine doctors, pediatricians, obstetrician-gynecologists, internists, psychiatrists, physician assistants, nurses, and other providers dedicated to providing safe, evidence-based healthcare to all Washingtonians[1]—submit this brief to bring to the Court's attention the practical risks and consequences of the Initiative's implementation.

The Initiative requires girls seeking to participate in school sports to "provide a health examination and consent form or other statement signed by the student's personal health care provider that verifies the student's biological sex," relying only on "reproductive anatomy, genetic makeup, or normal endogenously produced testosterone levels." I-638 § 3(2). But the Initiative defines none of these terms in clinical language, identifies no governing standard, and says nothing about what providers must do to comply with its verification requirement—effectively putting healthcare providers on the field without a playbook.

The sort of examination contemplated by the Initiative is not part of a routine sports physical and—critically from a provider standpoint—is *not medically necessary* to determine whether a child can safely participate in athletics. Sports physicals follow a model form developed by the nation's leading pediatric and sports-medicine organizations, and the American Medical Association ("AMA") opposes both medically unnecessary interventions *and* physician participation in athletic sex-verification requirements. Requiring providers to

[1] A more thorough description of Amici and their interests is included in their motion for leave to submit this brief, filed concurrently.

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

perform these examinations not only forces them to operate outside the standard of care and without clinical guidelines but also compromises the clinician-patient relationship to an irreparable degree.

These harms extend beyond the examination room. Faced with a medically unnecessary and potentially intrusive examination, some girls will simply stop playing—and will lose the well-documented mental health, academic, and developmental benefits of sports. And because laboratory alternatives are costly and unlikely to be covered by insurance, the Initiative creates a two-tiered system: Families with means can afford a less-intrusive path to eligibility while families with fewer resources cannot.

Amici and their members hold as their paramount objective the health and wellbeing of their patients. They should not be enlisted to participate in an untested legal regime that lacks any recognizable clinical grounding or purpose. Unless the Initiative is enjoined, providers will face significant compliance risks and girls who want to play sports will be left waiting for a clinician to certify something the Initiative fails to define. For these reasons and those that follow, Amici respectfully urge the Court to issue a preliminary injunction.

## II. ARGUMENT

### A. Requiring medically unnecessary sex-verification examinations departs from the established standard of care for sports physicals.

Physicians and other clinicians have a professional and ethical responsibility to recommend and perform only those examinations and tests that are medically necessary. Unnecessary procedures that are not medically indicated undermine the physician-patient

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

relationship and erode patient trust—a particular concern at a time when trust in physicians and medical providers is declining and medical misinformation is on the rise.[2]

For many children and adolescents, pre-participation physical evaluations (commonly known as "sports physicals") are formative interactions with doctors and other clinicians, critical to building clinician-patient trust. These evaluations are designed to identify conditions that could put young athletes at risk of serious injury, illness, or other health complications that might arise during physical activity, and they typically include an examination of the patient's vital signs, cardiovascular and musculoskeletal systems, and, at the physician's or clinician's discretion, a medical-history review.

These examination categories derive from the model physical-examination form (the "Model Form") developed by the American Academy of Pediatrics in conjunction with the American Academy of Family Physicians, the American College of Sports Medicine, the American Medical Society for Sports Medicine, the American Orthopedic Society for Sports Medicine, and the American Osteopathic Academy of Sports Medicine.[3] The Washington Interscholastic Activities Association ("WIAA") has long used the Model Form for these evaluations, and for good reason—it reflects the consensus of the nation's leading pediatric and sports-medicine organizations and follows established medical standards.[4] Its authors describe the evaluation's goals as follows:

Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

(1) Promote optimal and safe physical activity;

(2) Provide a framework to assess, promote, and discuss physical and psychological health related to physical activity;

(3) Encourage use and/or establishment of a medical home for continuity-based healthcare;

(4) Identify conditions that may be life-threatening or disabling; and

(5) Provide an opportunity for discussion of health and lifestyle issues.[5]

These goals reflect two core purposes: ensuring the child's safety and building a trusted relationship between the child and their physician or other healthcare provider. A requirement that physicians or clinicians verify "biological sex" as a part of these examinations serves neither goal and represents a significant departure from accepted medical practice. Notably, such verification requirements conflict with the AMA's guidance that "*physicians should only recommend and provide interventions that are medically appropriate*"[6] and with AMA policy opposing "satisfying third-party requirements to certify or confirm an athlete's gender through physician participation."[7]

*None* of the methods for verifying "biological sex" authorized by the Initiative is routinely necessary or medically appropriate for a sports physical. In particular, genital or "reproductive anatomy" examinations are not routine. Rather, they are sensitive procedures that might cause distress or discomfort and often require special precautions.[8] Physicians

must "protect patient privacy in all settings to the greatest extent possible," including by minimizing intrusions on a patient's privacy.[9] For these reasons, such examinations should be performed only when medically indicated. Performing them for any other reason conflicts with physicians' ethical obligations and could compromise the clinician-patient relationship and erode the very trust that sports physicals can otherwise build.

The Initiative's contemplated alternatives—genetic or chromosomal testing and hormone testing through a blood draw—present their own challenges. Chromosome-based sex verification of athletes was discredited decades ago as discriminatory and scientifically unsound.[10] Blood-based testing is also physically uncomfortable and can lead to follow-up testing that is itself medically unnecessary. For these reasons, among others, the AMA opposes the use of hormonal assessments to determine gender classifications for participation in sports.[11]

Requiring physicians and other providers to verify "biological sex" solely to satisfy an athletic-eligibility rule therefore raises serious ethical, privacy, and cost concerns, and it pushes clinicians well outside the accepted standard of care. These consequences reach beyond a single visit: For many children, the sports physical is one of their first independent encounters with the medical system, an annual rite of passage that marks the start of a new season. The Initiative turns that encounter into an occasion for a state-mandated, potentially intrusive examination unrelated to the child's health. A child subjected to that experience learns that the examination room is not a place that prioritizes their interests. That lesson

Fax: 206.359.9000

erodes the relationship between patients and clinicians and makes patients less willing to seek care or speak candidly with their providers.[12]

### B. The Initiative requires physicians to verify sex using nonclinical criteria and provides no standards.

The Initiative makes a student's healthcare provider the gatekeeper for girls' school athletics, yet it gives that provider no workable clinical standard to apply. To participate in competition activities "intended for female students only," a student must submit "a health examination and consent form or other statement signed by the student's personal health care provider that verifies the student's biological sex, relying only on one or more of the following: The student's reproductive anatomy, genetic makeup, or normal endogenously produced testosterone levels." I-638 § 3. The Initiative leaves basic questions unanswered: What clinical standard governs verification? What testing is required or permitted? How is informed consent obtained? How is patient privacy protected? And what happens when a student has a difference in sex development? By leaving these questions open, the Initiative ultimately demands that physicians and clinicians act outside standard clinical practice, without established clinical guidelines and the professional protections that accompany them and on which physicians ordinarily rely.

#### 1. The Initiative's operative terms are undefined or lack clinical meaning.

Each element of the Initiative's verification requirement uses language that does not reflect how medicine or nursing is practiced. The Initiative relies on generalized terms that

[12] Courts have long recognized that this kind of injury cannot be undone. Disrupting the physician-patient relationship is as irreparable as any harm can be—the trust destroyed cannot be restored with money damages. *See, e.g.*, *Fairfield Cnty. Med. Ass'n v. United Healthcare of New Eng.*, 985 F. Supp. 2d 262, 271–72 (D. Conn. 2013) (noting that several courts found that "disruption of the physician-patient relationship can cause irreparable harm that justifies issuing preliminary injunctive relief, particularly when the patient belongs to a vulnerable class"), *aff'd as modified*, 557 F. App'x 53 (2d Cir. 2014).

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

lack clinical specificity, leaving physicians and clinicians to guess at what compliance requires. The Initiative's problematic terminology includes the following:

- **"Health examination"** and **"consent form or other statement."** The Initiative defines neither term. *See* I-638 § 3(2). Providers are left to guess what they must do to comply or whether the verifications they sign satisfy the law.
- **"Reproductive anatomy."** This is a lay term, not a clinical one. It could mean an external genital examination, an internal genital examination, or imaging of reproductive organs. Each is an intimate procedure, and none would ordinarily be performed on a healthy child who simply wants to join a sports team. Physicians and other providers must therefore choose between an examination that might be legally inadequate and one that is clinically unjustified.
- **"Normal endogenously produced testosterone levels."** This criterion assumes a test that does not exist. No blood test isolates "endogenous" testosterone, and those in existence instead only measure circulating testosterone levels.[13]

Nor does the Initiative define "normal," specify a reference range, or account for differences in age or physical maturity. These differences are critical for younger athletes because, before puberty, circulating testosterone levels do not differ significantly by sex, *see* Compl. for Declaratory J. & Injunctive Relief ("Compl.") ¶¶ 5.30, 5.43—meaning this

[13] *See, e.g.*, David J. Handelsman, *Toward a Robust Definition of Sport Sex*, 45 Endocrine Reviews 709, 728 (2024), https://academic.oup.com/edrv/article/45/5/709/7641481 ("The specified measurement technology for testosterone recognizes that testosterone immunoassays have unacceptably limited sensitivity, specificity, and reproducibility at the low circulating levels in women at any age[.]"); Ruth I. Wood & Steven J. Stanton, *Testosterone and Sport: Current Perspectives*, 61 Hormones & Behav. 147 (2012), https://pmc.ncbi.nlm.nih.gov/articles/PMC3264812/pdf/nihms-334274.pdf (explaining that, "[d]ue to the dynamic regulation of endogenous testosterone production … testosterone concentrations may vary considerably within and among individuals," making it "difficult to establish a threshold separating endogenous testosterone from exogenous sources").

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

criterion cannot meaningfully distinguish biological sex for many younger students. Organized medicine has also consistently rejected this approach: As noted above, the AMA opposes the use of hormonal assessments to determine gender classifications in athletics. The Initiative would thus require Washington physicians and healthcare providers to engage in the very practices their profession's policymaking bodies have deemed inappropriate.

**2. For girls with differences in sex development, verification might be clinically impossible.**

The Initiative assumes that anatomy, genetics, and hormones always point to the same answer. They do not. For girls with differences in sex development (sometimes called intersex traits), chromosomal makeup, hormone levels, and anatomy might diverge.[14] In those cases, a physician may be unable to "verify" sex under *any* permitted method—a significant problem considering that the Initiative says nothing about how to resolve conflicting results.

**3. A physician's existing knowledge of the patient does not satisfy the Initiative's requirements.**

One might expect that a student's longtime pediatrician could simply attest to what the physician already knows about the patient, but the Initiative's text specifically forecloses that option: A physician's general knowledge of the sex a child was assigned at birth is not, by itself, one of the three enumerated criteria on which a physician may base their attestation. *See* I-638 § 3(2). Even the provider who knows the child best must therefore

[14] *See, e.g.*, Syed Faisal Ahmed et al., *Differences of Sex Development*, 11 Nature Revs. Disease Primers 54 (2025), https://pubmed.ncbi.nlm.nih.gov/40744924 (explaining that "there may be many scenarios where a simple classification is not applicable" because sex development "may vary depending on the person's age, and variants of a single gene may be associated with several different phenotypes").

**Ashurst Perkins Coie US LLP**
1301 Second Avenue, Suite 4200
Seattle, WA 98101-3099
Phone: 206.359.8000
Fax: 206.359.9000

conduct an examination or order a test that serves no clinical or medically indicated purpose whatsoever.

#### 4. Implementing the Initiative midyear, without guidance, compounds these problems.

Without time to develop statewide clinical guidance, physicians and other clinicians will be left to resolve on their own difficult professional and ethical questions about how to comply with the Initiative: whether to order tests that are not medically indicated, how to obtain informed consent from minors and their parents, how to document and protect sensitive results, and what to do when results are indeterminate. Imposing these requirements in the middle of the school year, as students prepare for winter sports, places needless burdens on students, families, schools, and a healthcare system already facing a well-documented, endemic shortage of primary-care physicians.[15] Pediatric and primary-care practices would have to absorb a sudden demand for verification visits that serve no clinical purpose, with no protocol to follow and no assurance that their judgments will be accepted.

### C. The Initiative will discourage girls from playing sports and create cost and access barriers that fall hardest on families with the fewest resources.

Faced with a choice between a medically unnecessary and potentially intrusive examination and giving up sports altogether, some girls will choose not to play. That loss is substantial. Participation in youth sports is associated with lower rates of anxiety, depression, and suicide and with higher grades and graduation rates. *See* Compl. ¶¶ 5.4–5.6

(citing, e.g., Molly C. Easterlin et al., *Association of Team Sports Participation with Long-Term Mental Health Outcomes Among Individuals Exposed to Adverse Childhood Experiences*, 173 JAMA Pediatrics 681–88 (2019)). Girls in particular experience gains in academic achievement and self-esteem. *Id.* ¶ 5.9. Leading pediatric authorities recognize these benefits and encourage participation in organized sports for that reason.[16] A measure that drives girls off the field in the name of protecting girls' athletics defeats its own purpose and denies children benefits that last well beyond any single season.

The Initiative also imposes costs, delays, and access barriers that will fall hardest on families with limited financial resources. The Initiative's three verification options—examination of "reproductive anatomy," testing of testosterone levels, or genetic testing—raise concerns about unequal access. Families who can afford laboratory testing might choose that option to spare their children a medically unnecessary genital examination. But those tests can be expensive and, because they are not medically necessary, are unlikely to be covered by insurance. The result is a two-tiered system, where families with means can buy their children a less-intrusive route to eligibility while families without means are left with needless genital examinations—or no sports at all.

## III. CONCLUSION

For these reasons, Amici respectfully urge the Court to grant Plaintiffs' motion for preliminary injunction.
